

ELITE VENTED HEATER TRANSFORMER

SAFETY INSTRUCTION

Model: T5KVAMV (VT30/1)

Input: 1Ph 230V/240V AC, 50/60Hz

Output: 1Ph 110V AC 50/60Hz 3000VA Continuous,
5000VA intermittent duty 5min on / 15min off

Output socket: 1 x 110V 32A

Net weight: 29.5kg

Power lead length: 1.7mtr

Core size: L265xW245xH360mm

All models' IP Rating: Class I; IP44; Ta=20°C.

If the external flexible cable of this appliance is damaged, it must be replaced by a qualified electrician or similar qualified person.

1. Read all of these instructions before you use the transformer.
2. The transformer will get warm in normal use, make sure that the heat will not damage any floor covering that the transformer is standing on. It is not advisable to place the transformer on to carpets, vinyl floor covering etc.
3. This transformer is fitted with an over temperature cut-out switch in the event of this operating, let the transformer cool down and reset the cut-out switch before using again.
4. Check the transformer's power rating against the load you are going to apply. The transformer can safely supply a load up to the rating shown on the transformer case.
5. This transformer must not be tested at class 2 appliances on portable appliance testers, flash test only at 1.5KV.
6. Isolating transformers have any inherent high inrush current, in the event of a fuse blowing when switching on, check that the fuse in the input is suitably rated and is of the anti-surge type, miniature circuit breakers protecting the transformer should have a type "4" tripping characteristic.
7. This transformer is not double insulated (Class 2) the earth pin of the output socket must be connected to the centre point of the secondary winding and to the transformer incoming earth.
8. The transformer should be positioned close to the supply point, only use extension cables on the 110volt side of the transformer.
9. If you do not understand any of the above points consult your supplier or a qualified electrician.
