

Description:

The Master DC61 is a hybrid infrared heater that can run on both mains power supply and a lithium battery. The lithium battery can be charged in just 60 minutes and will provide continual use up to 4 hours. Both the battery and the mains charger are included in the initial purchase.

Infrared heaters deliver heat fast, exactly to the place where it is required without any air movement. They are suitable for dust-free drying of walls or paints and defrosting machinery or pipelines. Also, can be used in factories, manufacturing facilities and warehouses plus many other applications.

The heater includes an integral safety device ensuring in the event of the heater being accidentally knocked over the power will cut out and therefore turn the heater off.

Specification:

- 110V 16A or 240V 13A plug
- Supplied with a 240V 13A plug
- Power – 17kW (1-setting) – 58,000 Btu
- Max current – 0.85A (240V) 1.82A (110V)
- Fuel Consumption – 1.35 kg/h
- Fuel Level Indicator
- Weight – 19kg
- IP20
- Noise 68 dB(A)
- Dimensions – 560 x 345 x 575mm (LxWxH)
- Overheat Thermostat included
